

BRINGING QUALITY TO THE SURFACE

IRISH TAR

FUARFLEX (C60B4)

Fuarflex is a specially formulated bitumen emulsion. It is used primarily as a binder in stabilised wet-mix macadam. It is designed to break slowly allowing the stabilised macadam to be stock piled for extended periods of time.

Fuarflex has been optimised to ensure excellent workability while still providing compressive strength to the mix after compaction has taken place.

ADVANTAGES OF FUARFLEX

- Adds strength to Clause 806 wet mix macadam.
- Provides excellent cohesion and adhesion with a variety of aggregates.
- Can be engineered to meet specific customer requirements.
- Storage stable emulsion.
- Resultant mixes can be stockpiled.
- Provides good workability to the mix.
- Excellent wet and dry strengths have been obtained on Duriez testing.
- Lower storage, mixing, and laying temperatures than foamed materials.

Fuarflex complies with The NRA Binder Specifications: RC 380/13 Table 1.
